Xabler Releases Upgraded Titanium Servers for Use in Its Home and Business Automation Systems

PROVO, Utah—September 5, 2005—Xabler announces a sleek new design for its Titanium Servers, a part of every Xabler control system installation. The servers act as command and storage centers, accessible from any touchscreen, computer or Web-enabled device.

Titanium servers are available with the choice of an attractive silver or classic black casing. The Titanium AV Server fits seamlessly into a stack of AV components. These powerful servers allow customers to Web-enable or Touch-enable their automation systems and extend control beyond the walls of their home or business.

Xabler's flagship product, Universal Control System (UCS), allows users to automate multiple brands of lighting, security and audio/video equipment from the couch or across the globe. The Titanium Servers house Xabler's proprietary software and make up the central command center of all Xabler systems.

About Xabler

Xabler of Provo, Utah was founded to meet the growing need of Wireless and IP-enabled control in home and business automation. The company focuses on hardware and software technologies that allow customers to control all brands of automated systems through a single, easy-to-use interface. Xabler's strengths are quick conversion, seamless integration, and powerful control options for both home and business customers. For more information on Xabler, visit www.xabler.com or call 888-388-0503.
