Xabler Adds Wireless 12-inch Tablet to Line of Versatile Touchscreens

PROVO, Utah—September 5, 2005— Xabler announces the release of a 12-inch wireless tablet-style touchscreen, featuring a 1024x768 resolution, usable in both landscape and portrait mode. This addition to the Xabler line of highly versatile touchscreens operates using Windows XP and is fully compatible with all Xabler solutions.

“As we expand our initial line of Xabler touchscreens, a portable model of this performance level was quite attractive,” Xabler CTO Kent Gividen noted. “Xabler systems are about providing a complete hardware and software solution that can be controlled through a single easy-to-use interface. This portable device is as convenient and easy-to-use as any I’ve seen.”

Other Xabler touchscreen models include an attractive desktop flatscreen, available in either the 12” or 15” screen size; and an in-wall option, also available in 12” or 15” size. Xabler touchscreens include high resolutions, fanless design or ultra-quiet fans, Wi-Fi, x86 architecture, an Ethernet port and the option of USB, RS232, CD-ROM, DVD or PS2 ports. They work with standard operating systems and Macromedia® Flash Player can be installed.

About Xabler

Xabler of Provo, Utah was founded to meet the growing need of Wireless and IP-enabled control in home and business automation. The company focuses on hardware and software technologies that allow customers to control all brands of automated systems through a single, easy-to-use interface. Xabler’s strengths are quick conversion, seamless integration, and powerful control options for both home and business customers. For more information on Xabler, visit www.xabler.com or call 888-388-0503.
